Get FIT for breast health

Flexible **Imaging Technology**, exclusively from Terason, delivers the next wave of ultrasound advancements for innovative exams. Extensive value-added features and a computer interface achieve the benefits of efficiency with diagnostic confidence when it matters most.

Image quality and clarity for assessment and visualization of detected abnormalities is essential in breast screening. Terason's **OmniBeam™** increases the spatial detail and accuracy of curved surfaces while **TeraVision™ II** provides refined texture and detail.

Best FIT for your practice

Breast-specific presets, custom exams, easy documentation and a customizable report page result in faster patient throughput.

X-Site™ probes with advanced crystal technology, coupled with Terason's unique **DDR™** uniform imaging capabilities, combine to create your one-probe portable system solution.

Easy FIT for your practice

Intuitive interface makes navigation easy for fast and simple exams and seamless integration into your practice. Take advantage of Terason's true laptop versatility to streamline workflow, integrate with EMR and easily store data.

An affordable investment in a Terason system is protected for years to come with fast, responsive remote support, full-coverage warranties, and a comprehensive upgrade path.
